EDUCATION

De La Salle University

Bachelor of Science in Computer Science, Major in Software Technology

Aug 2023 – May 2027

Manila, Philippines

EXPERIENCE

DevOps Engineer Intern

Phitopolis

May 2026 – Sept 2026

BGC

- Provisioned and managed AWS cloud infrastructure for a Project Manager Application using Terraform for Infrastructure as Code and Ansible for configuration management, enabling repeatable and auditable deployments.
- Refactored Docker containerization and authored modular Ansible playbooks, standardizing deployment pipelines and improving environment consistency across active projects.
- Architected and deployed AWS cloud infrastructure for an internal Claude-based agentic AI framework, enabling automated multi-step task orchestration for engineering workflows.

Full-Stack Developer Intern

Elinnov Technologies Inc.

Jan 2026 – Apr 2026

Taguig

- Engineered a payroll generation system using C# and ASP.NET Core, translating BRD/SDD research and UI mockups into a production-ready backend.
- Developed custom language adapters to integrate Python-based libraries into the C# ecosystem, enabling cross-language interoperability for specialized features.
- Containerized the application stack with Docker and spearheaded on-premises deployment using PostgreSQL, ensuring environment consistency and data persistence.

Full-Stack Developer Intern

Symph

Sept 2025 – Jan 2026

Cebu City

- Migrated an existing application from a full-stack Next.js architecture to a monorepo architecture using NestJS, Next.js, Nx, and Google Cloud Storage, improving organization and deployment efficiency.
- Developed AI image generation optimization features and automated image upload workflows using Next.js and Google Cloud Storage.
- Built and debugged features for a Dragonpay-integrated payment gateway application serving 50+ SME clients.

PROJECTS

Personal Homelab & Infrastructure Management

Ubuntu Server, CasaOS, Docker, Linux, Ansible

- Configured and maintained a self-hosted Ubuntu Server, utilizing Ansible to fully automate the end-to-end deployment of infrastructure and core services.
- Orchestrated local Docker containers, ensuring seamless operation of self-hosted applications and databases.

"Central Brain" RAG System

FastAPI, Pinecone, Gemini API, Python

- Architected a Retrieval-Augmented Generation (RAG) backend utilizing FastAPI to streamline data querying and pipeline execution.
- Integrated a Pinecone vector database with the Gemini API to orchestrate context-aware information retrieval and dynamic response generation.

TECHNICAL SKILLS

Tools & Cloud: Linux (AlmaLinux, Ubuntu Server), AWS, GCP, Firebase, Docker, Ansible, Terraform, Git, Gitlab CI/CD

Languages: C#, Python, C/C++, Java, JavaScript, TypeScript

Frameworks: Node.js, Next.js, NestJS, Nx, ASP.NET, React Native, React

Databases: PostgreSQL, MySQL, MongoDB

Certifications: Google Cloud Digital Leader, AWS Cloud Practitioner
